## All Plugins

On the left you see the list of all plugins available for your QGIS, both installed and available for download. Some plugins come with your QGIS installation while most of them are made available via the plugin repositories.

You can temporarily enable or disable a plugin. To *enable* or *disable* a plugin, click its checkbox or double-click its name...

Plugins showing in **red** are not loaded because there is a problem. They are also listed on the 'Invalid' tab. Click on the plugin name to see more details, or to reinstall or uninstall this plugin.

**Available version (stable)** [3.2.1](#) updated at Ijuma Jun 28 11:26:33 2019

**Changelog** 3.2.1 2019-06-28

- \* Bug fixes

3.1 2018-12-31

- \* Fix issue with reload on generated plugins

3.0.5 2018-12-31:

- \* Fix issue with reload on generated plugins

3.0.4 2018-12-25:

- \* Move dialog creation to run method.

- \* Move help file generation files to proper method

- \* Include missing tags file

- \* Attempt to compile resources.qrc when plugin is generated (requires pyrcc5 in path)

## Plugin Builder Results

Congratulations! You just built a plugin for QGIS!

Your plugin **PhotoLinker** was created in:

**/home/samweli/Desktop/photo\_linker**

Your QGIS plugin directory is located at:

**/home/samweli/.local/share/QGIS/QGIS3/profiles/default/python/plugins**

## What's Next

1. If resources.py is not present in your plugin directory, compile the resources file using pyrcc5 (simply use **pb\_tool** or **make** if you have automake)
2. Optionally, test the generated sources using **make test** (or run tests from your IDE)
3. Copy the entire directory containing your new plugin to the QGIS plugin directory (see Notes below)
4. Test the plugin by enabling it in the QGIS plugin manager
5. Customize it by editing the implementation file **photo\_linker.py**
6. Create your own custom icon, replacing the default **icon.png**
7. Modify your user interface by opening **photo\_linker\_dialog\_base.ui** in Qt Designer

## Notes:

- You can use **pb\_tool** to compile, deploy, and manage your plugin. Tweak the *pb\_tool.cfg* file included with your plugin as you add files. Install **pb\_tool** using *pip* or *easy\_install*. See [http://loc8.cc/pb\\_tool](http://loc8.cc/pb_tool) for more information.
- You can also use the **Makefile** to compile and deploy when you make changes. This requires GNU make (gmake). The Makefile is ready to use, however you will have to edit it to add additional Python source files, dialogs, and translations.
